d m

the number of results predicted by chance to have a

score greater than or equal to the score of the result being prin and is derived by analysis of the total score distribution.

Note to variation annotation may not be found in the sequence submorranged to the overlapping clone, as we submit seque only a small overlap as described above.

This sequence was finished as follows unless otherwise not regions were either double-stranded or sequenced with an a
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             chemistry or coursed by high quality data (i.e., phred quality of an attempt was made to resolve all sequencing problem as compressions and repeats, all regions were covered by a one plasmid subclone or more than one M13 subclone; and it assembly was confirmed by restriction digest. The following abbreviations are used to associate primary accession number.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            AL603707 234182 bp DNA linear ROD 17

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         781                                                                                                                                                                                                                                                                                                    The sequence data in this record represents an 'enhanced' version of a Phase 2 submission. Specifically, the indicat order and orientation of each sequence contig has been established using one or more of the following: read-pair data from individual subclones, overlaps with neaghboring clones, alignment with available reference sequence (e.g., human), and/or confirmation by PCR testing. In addition, the sequence assembly is based on at least 8X average coverage in Q20 bases and has been reviewed to rule gross misassemblies, the low-quality ends of sequence
contigs have been trimmed away, and each base is associate with a Phrap-derived quality score.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          is believed to be correct as given, however the sizes of the gaps between them are based on estimates that happrovided by the submitter.

This sequence will be replaced by the finished sequence as soon as it is available and the accession number will be preserved.

ted (19-NOV-2002) Human Genome Sequencing Center, Department ecular and Human Genetics, Baylor College of Medicine, One Plaza, Houston, TX 77030, USA.

19, 2002 this sequence version replaced gi:23616728.

quence in this assembly is a combination of BAC based reads old genome shotgun sequencing reads assembled using Atlas (Aww. hgsc. bcm. tmc. edu/projects/rat/). Each contig described feature table below represents a scaffold in the Atlas (Aww. hgsc. bcm. tmc. edu/projects/rat/). Each contig described if a contig-scaffold.). Within each contig-scaffold, dual sequence contigs are ordered and oriented, and separated ed gaps filled with Ns to the estimated size. The sequence tend beyond the ends of the clone and there may be sequence is within a contig-scaffold that consist entirely of whole shotgun sequence reads. Both end sequences and whole genome in sequence only contigs will be indicated in the feature
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              is Estimated insert size may differ from sequence length see http://www.hgsc.bcm.tmc.edu/docs/Genbank_draft_data.html). Intis is a "working draft' sequence. It currently ists of 5 conties. The true order of the pieces of known and their order in this sequence record is
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        ted (25-APR-2002) Human Genome Sequencing Center, Department ecular and Human Genetics, Baylor College of Medicine, One Plaza, Houston, TX 77030, USA

Submitted (10-MAY-2003) Human Genome Sequencing Center, Del of Molecular and Human Genetics, Baylor College of Medicinn Baylor Plaza, Houston, TX 77030, USA On May 10, 2003 this sequence version replaced gi:25008075 on May 10, 2003 this sequence version replaced gi:25008075 on May 10, 2003 this sequence version of BAC bases and whole genome shotgun sequencing reads assembled using, (http://www.hgsc.bem.tmc.edu/projects/rak/). Each contig dinthe feature table below represents a scaffold in the At assembly (a 'contig-scaffold'), Within each contig dindividual sequence contigs are ordered and oriented, and by sized gaps filled with Ns to the estimated size. The semay extend beyond the ends of the clone and there may be sized gaps filled with Ns to the estimated size. The semay extend beyond the ends of the clone and there may be sized gaps filled with Ns to the stimated size. The semany extend beyond the ends of the clone and there may be sizence shotgun sequence reads. Both end sequences and whole shotgun sequence only contigs will be indicated in the fea
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        Assembly program: Atlas 3.0;

r details.

ibrary was prepared and sequenced in Mouse Genome
Dpedia Project of Genome Exploration Research Group in Riken
Sciences Center and Genome Science Laboratory in RIKEN.
On of Experimental Animal Research in Riken contributed to
mouse tissues. First strand CDNA was primed with a primer
AGGAGAAGGATCCATTTTTTTTTTTTTTTTTT 3', ONNA was
ed by using trehalose thermo-activated reverse transcriptase
bequently enriched for full-length by cap-trapper. CDNA wen
two rounds of normalization to Rot = 20.0 and subtraction
= 458.8. Second strand CDNA was prepared with the primer SAGATICTCGAGITAATIAAATTAATCCCCCCCCCCC 3']. cDNA was cleaved r of sequence [5'

amHI and XhoI. Vector: a modified pBluescript KS(+) after xcision from Lambda FLC I. Cloning slites, 5. end: SalI; 3. amHI. HORE: DHIOB. Retina RNA was provided by Stefano cich (Department of Neurobiology, Harvard Medical School, 20 od Ave., Boston, MA 02115, USA) whose assistance is ully acknowledged.

RNA was provided by Stefano Gustincich (Department of

```
iology, Harvard Medical School, 220 Longwood Ave., Boston, MA USA) whose assistance is gratefully acknowledged.

/note="Vector: pt7T3D-pac (Pharmacia) with a modified polylinker; lst strand cDNA was prepared from mammary gland tissue from a lactating female, and was then primed with a Not I - oligo(dT) primer. Double-stranded cDNA was ligated to Eco RI adaptors (Pharmacia), digested with Not I and cloned into the Not I and Eco RI sites of the modified pT73 vector. Library is normalized. Library was constructed by Bento Soares and M. Fatima Bonaldo."

3 687 bp mRNA linear EST 02-MAY-2002 00-coc-1-22-0-UI.sl UI-R-EPO Rattus norvegicus cDNA clone 0-coc-1-22-0-UI 3', mRNA sequence. norvegicus Aa; Metazoa; Chordata; Craniata; Vertebrata; Euteleostomi; a; Eutheria; Rodentia; Sciurognathi; Muridae; Murinae; norvegicus (Norway rat) GI:20424898 3.1

',M.F., Lennon,G. and Soares,M.B. zation and subtraction: two approaches to facilitate gene Res. 6 (9), 791-806 (1996) 687) 1 to

Dento-scares@ulowa.edu
nuence contained an oligo-dT track that was present in the
clootide that was used to prime the synthesis of first
clootide that was used to prime the synthesis of first
cDNA and therefore this may represent a bonafide poly A
he sequence tag present in the cDNA between the NotI site
coligo-dT track served to identify it as a clone from the
cal duodenum library cDNA Library Preparation: M.B. Soares
ne distribution: clones will be available through Research
